

Unlock the value of your old technology

At GBM we understand that having value locked up in ageing technology can be a headache, that's why we created our Buyback and Recycle scheme.

The scheme has helped other schools realise the value in their ageing hardware. Whether it is Apple or other brands, we work to give you the best possible value back on those devices, releasing money back into your school's budget.

If after auditing your ageing technology your devices hold no residual value, we will still collect them at no cost to you.*

We will make every effort to reuse and recycle devices, never letting them go to landfill

Working with our partners we will aim to reuse or repurpose devices in-line with the WEEE directive and send them to Africa to furnish schools.

What are the benefits of this scheme:

- Your ageing technology does not end up in landfill but goes to classrooms in African schools.
- We will buyback your old devices and free up the value locked in them.
- When technology cannot be re-purposed we break it apart and recycle the parts.
- We will provide you with the legal paperwork to prove the technology was destroyed (Certificate of Destruction).
- All devices are cleansed to Data Protection (1998) standards.

Let GBM help you realise the value of your technology.
