- Step 3: Lesson delivery and assessment
- Step 4: Consolidation and measurement
- Step 5: Next steps

Turn over for more information on any of the training topics included.

Total cost:

£995 +VAT

There is an incredible skills gap developing across the EU due to a lack of relevant IT skills¹, which is replicated in education, with 74% of teachers identifying issues integrating technology within their lessons².

At GBM, we support schools embedding technology in their curriculum, in order to up-skill students, and prepare them for the world of work.

Vision for learning

Your vision for learning provides a platform on which we can evaluate progress, celebrate success, and learn from issues, in order to refocus the plan. It all starts by imagining the ideal scenario, and formulating a plan to attain it. For sustained impact, this is personalised for each individual/group.

Mapping and integration

Working with your Key Stage/Subject leads is an essential part of the process. We examine units of work, and focus on specific areas of interest. Lessons are then designed with a coach/mentor, who will guide you through the plan, and help to assess your progress throughout.

Lesson delivery and assessment

Lessons are delivered through a mixture of modelled lessons, and team-teaching sessions to provide in-class ongoing professional development. Modelled lessons are extremely powerful, as they allow your teachers to observe sessions, run with their own class, in their own environment.

Consolidation and measurement

Progress will be evaluated at different times after the training, to see what impact this has had; not just on your teaching, but also, your students learning.
