

As institutions incorporate more mobile devices, like iPad in their classroom, there are many advantages to be gained for educators and students. There are also management challenges that need to be considered early on.

ZuluDesk is designed just for education and enables every iPad in your institution to be managed, letting staff and students get on with the business of teaching and learning.

Top 3 things to know about ZuluDesk Teacher

- Teachers can create lessons ahead of time and create profiles for that class.
- When the lesson starts, teachers can select the right lesson profile and only pre-approved apps and websites are visible for the duration.
- Teachers can even put time limits on tasks and send students messages to remind them to stay on track or come back to the classroom.

Top 3 things to know about ZuluDesk Parent

- Parents can use any web-enabled device to manage their child's iPad when it comes home.
- When students leave school parents can be in charge and guide time on their child's iPad so they don't get distracted when doing school work.
- The school can still restrict what apps are downloaded to devices even outside the school gates if needed, we think this is especially useful if you have a shared iPad environment.

Thanks to ZuluDesk's Management System the IT department and teachers can share the responsibility for managing devices. Using this management system means all devices are trackable, updatable and manageable from one dashboard.

As a ZuluDesk Partner GBM have all the knowledge and skills to ensure a smooth adoption. So, if you think ZuluDesk could be the solution you are looking for or want to explore your options further with a GBM Education Consultant, please get in touch.
