

# Are you getting the benefits you hoped from bringing iPad into your classrooms?

We want to help you get the most from your iPad deployment, which is why we are offering you a FREE Health Check\*.

As an Apple Solution Expert for Education we have implemented thousands of successful iPad deployments and think we have the recipe for success.

## Health Check

### 2. Device Management

How do you manage and keep track of your iPads? We will audit and advise the best way for you to wirelessly manage your devices, in order to save time and get the best experience with a robust MDM (Mobile Device Management) system.

### 1. Workflow and Assessment

It is important that you think about how you are going to store and assess your student's work. Can you share worksheets, assignments, and content - as well as collect it back in for evaluation and evidence?

### 3. WiFi

We will conduct a WiFi survey to understand your current network. From there we can advise you on any issues we discover and the best solution for the job, we can install this solution and support you moving forward.

### Written Report

Once we have conducted the Health Check we will send you a written report highlighting any areas of concern and our suggested solutions to resolve them. This will give you a plan if you wish to act on our findings.

If your school could do with advice on any of these areas, please get in touch today?

\*The Health check will take approximately 2 hours on-site with your IT/Computing lead.
