

# Turn your iPad Pro into a drawing tablet for Mac

## Meet Astropad

No longer do you need a separate drawing tablet and an iPad. With the Astropad app on your iPad Pro your iPad becomes a graphic tablet for your Mac.

Astropad uses all the best features of iPad and Apple Pencil so it's perfect for any professional. And best of all, Astropad can be used on the move thanks to its wireless feature, now you can have great ideas anywhere.

### Completely Customisable\*

Because no two designers are the same, Astropad is completely customisable. You can create sidebar shortcuts that change depending on the Mac app you are using. The Magic Gestures feature also enables you to create shortcut combinations using Apple Pencil and finger touch, making editing work quick and straight forward. While Stroke Lab allows you to adapt every Apple Pencil stroke to mirror your preferences.

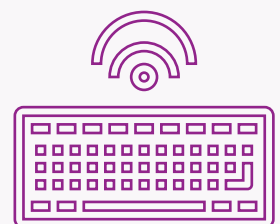

### Astropad Works Seamlessly

Astropad on iPad has been built to work with all Mac apps as one connected workstation. So you can use the apps that are familiar to you including Adobe Photoshop, without the need for drivers. Also, because Astropad can be used wirelessly thanks to some breakthrough network technology, you no longer have to have all your great ideas sat behind your desk.

### Compatible With Keyboard\*

As Astropad was built just for iPad key features like keyboard support were built straight in. So while using Astropad, you can either use the iPad Pro on-screen keyboard to add or edit text or connect your Bluetooth or Smart keyboard quickly.
