

Move to Cloud Services **GBM**

Technology is evolving at such a rate that we understand it can present some real technical challenges.

Employees have expectations about the level of service they will receive while sat at their desk on their iPad or when using their iPhone to access their email while out of the office.

Let GBM take the hassle away from your team by letting us manage, update and maintain your infrastructure in our UK-based hosting centre.

To help you decide we have created three services:

Private Cloud

In a world where 2.5 quintillion bytes of data are created every day making sure your infrastructure is able to manage is key to your businesses ongoing success.

Private Cloud gives you the dedicated space you need to grow your environment, while not compromising on control. All this within a UK data centre that is built to Tier III standards.

Cloud Emails

Email is a must-have for all businesses 24/7, which is why IT teams spend so much time making its infrastructure highly reliable and accessible.

Our Cloud Email service powered by Office 365 provides you with a secure, scalable solution that reduces TCO per user and is flexible enough to grow as your business does.

Cloud Backup and Recovery

We understand how losing valuable data feels, which is why we offer a Cloud-based Backup and Recovery service.

With cloud-based backup and recovery your data is accessible when and where you want it, so you never have to worry about losing important files again. And should the worst happen, our engineers are here to get you back to normal with minimum downtime.

What are the benefits of using our service?

- ✓ Data stays within EEA borders, offering you guaranteed data sovereignty
- ✓ Scalable solution to suit your budget and needs
- ✓ 99.9% availability
- ✓ Data is housed in an ISO-Accredited ultra-secure UK
- ✓ Increase capacity while reducing costs
- ✓ Streamline business processes
- ✓ Free up the IT teams time
