

G:M Does your cloud have a silver lining?

We understand what it takes to get the most out of your IT system, which is why we have integrated our managed and hosting service solutions to create Silver Lining. Silver Lining is a flexible cloud-based hosting service that lets you pick and choose the elements that you need to make your IT work for you.

We know that a smooth running business is imperative, so we have created five services to help. If you need something else, get in touch and we can create a service that meets your needs.

Keeping up with storage, licensing and security requirements is a complicated and time-consuming process for any IT department. That's why our consultants and engineers can work in partnership with your team to build a service that does as much or as little of this stuff as you want.

SHARED CLOUD

If you need to expand your environment but aren't sure of your requirements yet, then shared cloud could be for you. This intelligent shared environment can be integrated with your current network or stand outside, and if you find out you need more space, our scalable virtual servers can easily expand to meet your new requirements.

PRIVATE CLOUD

In a world where 2.5 quintillion bytes of data are created every day making sure your infrastructure is ready is key to your businesses ongoing success. Our service, Private Cloud gives you the dedicated space you need to grow your environment, while not compromising on control. All this within a UK data centre that is built to Tier III standards.

CLOUD BACKUP & RECOVERY

We understand how losing valuable data feels, which is why we offer a Cloud-based Backup and Recovery service. With our cloud-based backup and recovery your data is accessible when and where you want it, so you never have to worry about losing important files again. And should the worst happen, our engineers are here to get you back to normal with minimum downtime.

CLOUD EMAIL

Email has become a heavily utilised tool in business, in fact, it is estimated that 205 billion emails are sent per day worldwide. These facts alone make it understandable why IT teams spend so much time and money making email infrastructure highly reliable and accessible. But what if you could have all this without the upfront cost and ongoing management? Our Cloud Email service is the answer, it is powered by Office 365 and provides you with a secure, scalable solution that reduces TCO per user and is flexible enough to grow with your business.

www.

WEB FILTERING

Making sure your employees do not stumble across inappropriate content when searching the web can be easily managed through our web filtering service. Our anywhere, anytime filter works across WiFi and cellular networks making it easier to ensure no-one accidentally poses a security threat to the business.

What Are The Benefits Of Silver Lining?
